

ID	Name	Description	Priority (1 highest)	Rationale		
Users						
	1 Required User Information	The user shall give the following information to make an account:		1 The system needs to know about the users.and make an account to be properly used.		
	1.1 -Email address *required	-Email address *required		1 The system needs a way to remember the user for the password.		
	1.2 -Password *required	-Password *required		1 The system needs a way to prevent unauthorized users from accessing accounts.		
	1.3 -First name	-First name		2 It helps responders respond to the requests faster and easier.		
	1.4 -Last name	-Last name		2 It helps responders respond to the requests faster and easier.		
	1.5 -Username *required	-Username *required		1 The system needs to tell users apart, including users with the same first and last name.		
	1.6 -Location *required	-Location *required		1 The system needs to know where the user is to know what alerts apply to them.		
	1.7 actions	All users shall perform the following actions:		1 Any of the users could be in a situation where they need help, or to request help for other people, so it is useful to have the option to make a request.		
	1.71 help request creation	-the user shall create a help request		1 The user needs to be able to ask the system for help if needed.		
	1.72 help request edit	-the user shall edit a help request		1 If a user needs to update or change information provided, they should be able to do so.		
Admin						
	2.1 Required Admin Information	The user shall give the following additional information to make an admin account:		2 Admins have more features and responsibilities, so asking for extra information reduces the risk of false accounts being created.		
	2.11	-Phone number *required		2 Requiring a phone number makes it easier to prevent fake admin accounts.		
Shelter Worker						
	3.1 update resources	The user shall update what resources the system reports they have.		1 Victims need to have an up to date record of what resources shelters have so that they can make a better judgement on what shelter to go to.		
	3.2 move resources	The user shall be able to send resources to other shelters.		3 Shelters might want to spread resources to other shelters so that there are more places with enough resources to care for victims.		
Dispatcher						
	4.1 response to request	The user shall respond to requests sent by victims.		1 The system needs to be able to notify victims when their requests are answered so that they know they are getting help.		
	4.2 validate request	The user shall be able to request more information		2 a dispatcher should be able to make users verify or validate their requests if they suspect the request is in bad faith or unnecessary.		
	4.3 finish request	The user shall be able to remove a request.		1 The system needs to know when a request is done so it knows that the victim no longer needs help and attention can be focused to other requests.		
Volunteers						
	5.1 required volunteer information	The user shall provide the following additional information to make a volunteer account:		1 The system needs to know certain information about a user to make an account.		
	5.11	-license(s) *required for some situations		1 volunteers should prove that they can do certain things before being allowed to do them.		
	5.12	-certifications *required for some situations		1 volunteers should prove that they can do certain things before being allowed to do them.		
	5.13	-field(s) of expertise		1 volunteers should only respond to situations in which they have relevant knowledge or skills.		
	5.3 volunteer verification	-Volunteers shall verify their identity		1 since volunteers have access to some degree of PII, they need to be a trusted individual.		
	5.4 skills verification	-Volunteers shall prove they have certain skills		1 proof of things like a medical license, cpr certification, etc. needed for the volunteer to be able to respond to certain situations.		
	5.5 actions	All volunteers shall perform the following actions:		1 volunteers need to be able to interact with help requests in order to know what to do.		
	5.2 offer to help	-The user shall offer to help during a hurricane as a volunteer.		1 volunteers need to be able to tell the system that they can help in order for the system to give them requests.		
	5.51 update request	-The user shall update help requests		1 if, after responding, the status of a help request is out of date, a volunteer should update it.		
	5.52 finish request	-The user shall delete help requests		1 if, after responding, the help request is 'complete', a volunteer should delete it.		
Victims						
	6.1 help request creation	The user shall create a help request.		1 The system needs a way for people to ask people for help.		
	6.2 shelter call ahead	The user shall notify a shelter of their arrival.		2 People can notify the shelters that they are coming so they know how many people are coming before people get there.		
Shelters						
	7.1 shelter space	The user shall view a shelter's current availability.		1 The user will want to only go to shelters with enough space for them.		
	7.2 shelters supplies	The system shall detect when one of the shelters is out of supplies.		1 The system needs to be able to tell people when there are no supplies left for them at a specific shelter.		
	7.3 shelter verification	The system shall allow for admin to verify a shelter's capacity.		2 The system could use a way to make sure that the shelters can hold the correct number of people.		
	7.4 shelter locations	The system shall show users locations of shelters on a map.		1 The system needs to be able to show people where the safe shelters are in a storm.		
Resources						
	8.1 donations	The system shall allow people to donate the following resources:		2 The system could use this for people who want to help others.		
	8.11	-shelter supplies		2 Could be useful for extra supplies for people during the storm.		
	8.12	-volunteering hours		2 Could be useful for help with building things or helping shelter get things up and running.		
	8.13	-money		2 Could be useful to help get supplies for the storm.		
	8.2 resource report	The user shall see what resources are available in their area.		3 It is useful for victims to know what resources they can expect and for volunteers to know if they are needed by seeing available resources.		
Relief Requests						
	9.1 request making	The user shall report the following information when making a request:		1 The system needs to know what a person needs so that victims can get exactly what they need, where they need it.		
	9.11	-name of person reporting		2 The system needs to know who is reporting.		
	9.12	-name of person needing relief		1 The system needs to know who needs help, in case the reporter is getting help for someone else.		
	9.13	-current location		1 The system needs to know where to send help to.		
	9.14	-current situation		1 The system needs to know what is happening to cause the user to ask for help.		
	9.15	-type of help needed		1 The system needs to know what exactly is needed to best help the user.		
	9.2 quick request	The user shall be given a secondary option to make an emergency request immediately, giving information later.		2 The user may need help as soon as possible and might not have enough time to give information before sending the request.		
Hurricane						
	10.1 hurricane in area alert	The system shall alert the user if a hurricane is near their location.		1 Important for users to know when they are in danger.		
	10.2 hurricane report	The system shall report the following information about each hurricane:		1 Important for the user to know as much as possible about the hurricane to be prepared.		
	10.21	-current location		1 Useful to know where the hurricane is to get ready.		
	10.22	-predicted path		1 Useful to know where the hurricane is going to tell how close the hurricane is to them.		
	10.23	-locations already affected by hurricane		2 Useful to also know where a hurricane has been to know where help might be needed.		
Geographical Region						
	11.1 location report	The system shall store the following information about each geographical location:		1 The system needs to know information about the location to know how much danger there is, and how much help is available.		
	11.11	-Location name		1 The users need to be able to recognize the locations		
	11.12	-Adjacent locations		3 When a hurricane is in an area, it is useful to also know what other locations are near that area.		
	11.13	-Current hurricanes in area		1 The system needs to know if it needs to send an alert to users in the area.		
	11.14	-Shelters in area		1 The system needs to know where users can go if they are affected by a hurricane in the area.		
	11.15	-volunteers in area		2 Useful to know how many volunteers are in an area to know how prepared an area is to help.		
	11.16	-known damage in area		2 Useful for users to know about downed trees, powerlines, and other damage.		
	11.17	-recent hurricanes		3 Useful to know if a hurricane was recently in an area to know if people are likely still recovering.		
Hurricane Manager						
	12.1 hurricane adder	The system shall allow admin accounts to add hurricanes to a list of all active hurricanes.		1 The system needs to know when a hurricane is happening, so there needs to be a way for hurricanes to be added.		
	12.2 hurricane location updater	The system shall allow admin accounts to update a hurricane's location.		1 The system need to be able to update when a hurricane's location changes so that people will have more accurate information.		
	12.3 hurricane path updater	The system shall allow admin accounts to update a hurricane's predicated path.		1 The system need to be able to update a hurricane's path as it changes so that people will have more up to date information.		

12.4	hurricane remover	The system shall allow admin accounts to remove a hurricane.	1	Once a hurricane is over, it's location does not need to be tracked anymore, so it should be removed.		
Alerts						
13.1	send alert	The system shall send users an alert when an admin account gives the following:	2	Useful for admins to be able to send alerts with descriptions that are more useful than automated reports.		
13.11		-locations affected	1	Needed to filter which users will receive the alert.		
13.12		-description of alert	2	Useful for admins to communicate details to all users in an area.		
13.2	receive alert	The user shall receive an alert only if it meets one of the following criteria:	1	Users should not see an alert if they are not in danger of the hurricane that the alert is about.		
13.21		-hurricane is in user's location	1	The user needs to know that they are in a hurricane so they know to evacuate or seek shelter.		
13.22		-hurricane location will travel to user's location	1	The user needs to know if a hurricane is heading towards them so they can prepare ahead of time.
